DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Sunday, 10 September 2023 at 04:37 Local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: The advance of more unsettled weather conditions should help lead to mainly Low air pollution for many, although areas of Moderate air pollution are likely to survive in parts of eastern and southeastern England.

Tomorrow: Low air pollution levels are expected to become established across the UK, with perhaps the odd pocket of Moderate levels surviving in the far southeast.

Outlook: More seasonable and changeable weather conditions should help to ensure Low air pollution levels across the UK during this period.
